RESEARCH INTERESTS

My research focuses on molecular-cloud formation and star formation across a broad range of spatial scales and using diverse observational tracers, from dust continuum emission to atomic and molecular spectral lines. I am particularly interested in the dynamics of the interstellar medium (ISM), giant molecular-cloud properties, cloud assembly and dispersal, and the role of stellar feedback in regulating star formation in the Milky Way and nearby galaxies.

ACADEMIC & RESEARCH APPOINTMENTS

- 2025–present **UNIVERSITY OF COLOGNE** | *Cologne, Germany*
Postdoctoral Researcher in Astrophysics
Investigate the formation, structure, evolution, and dispersal of molecular clouds and star-forming regions, with emphasis on stellar feedback and gas dynamics in the Milky Way and nearby galaxies. Analyze spectrally resolved far-infrared, submillimeter, and radio data, including SOFIA/upGREAT [C II] 158 μm and [O I] 63 μm observations, Herschel dust-continuum maps, CO spectroscopy, and H I data. Develop Python-based analysis and modeling pipelines for large astronomical data sets and spectral cubes (100 GB+; millions of spectra), including column-density mapping, cloud identification, spectral analysis, clustering, PCA, and other statistical/ML methods. Apply radiative-transfer and photodissociation-region (PDR) modeling to infer physical conditions and interpret atomic and molecular line emission. Author/co-author of 10 refereed publications, including 4 first-author papers.
- 04/2021–06/2025 **UNIVERSITY OF COLOGNE** | *Cologne, Germany*
Doctoral Researcher in Astrophysics
Doctoral research on molecular-cloud formation, star formation, and stellar feedback from Galactic clouds to giant molecular clouds in M33.

EDUCATION

- 2021–2025 **PhD in Astrophysics** | University of Cologne | *Cologne, Germany*
Dissertation: “The Genesis of Stars: From Giant Molecular Clouds to Star-Forming Cores”
Advisors: Prof. Dr. Jürgen Stutzki and Dr. Nicola Schneider | Grade: 1.0 (magna cum laude)
- 2016–2019 **M.Sc. in Physics** | Johannes-Gutenberg University Mainz | *Mainz, Germany*
Thesis: “Standard Model Effective Field Theory Effects in Dijet Events at Tevatron” | Grade: 1.3
Focus: Elementary Particle Physics and Quantum Field Theory | Minor: Meteorology (Atmospheric Hydrodynamics)
- 2011–2016 **B.Sc. in Physics** | Johannes-Gutenberg University Mainz | *Mainz, Germany*
Thesis: “Massenbestimmung steriler Neutrinos anhand von Supernovae” | Minors: Mathematics and Computer Science

FELLOWSHIPS & AWARDS

Walter Benjamin Fellowship — German Research Foundation (DFG)

(awarded 2026). Two-year independent postdoctoral research fellowship for a research stay at NASA Jet Propulsion Laboratory (JPL), California Institute of Technology.

SCIENTIFIC COLLABORATIONS & AFFILIATIONS

- SFB 1601 — “Habitats of Massive Stars across Cosmic Time”** — Member of the University of Cologne Collaborative Research Center, Project B2; studies massive-star feedback and its gaseous environments using velocity-resolved atomic and molecular spectroscopy.
- NASA ASTHROS** — Member of the science team for the Astrophysics Stratospheric Telescope for High Spectral Resolution Observations at Submillimeter-wavelengths, a high-altitude balloon mission with a major science focus on stellar feedback.
- SOFIA FEEDBACK Consortium** — Member of the legacy survey studying stellar feedback in massive star-forming regions through velocity-resolved [C II] 158 μm and [O I] 63 μm observations with SOFIA/upGREAT.

RESEARCH & TECHNICAL EXPERTISE

Observational astrophysics: Far-infrared/submillimeter/radio spectroscopy and continuum analysis; ISM, molecular clouds, star formation, stellar feedback, PDRs; SOFIA/upGREAT, Herschel, CO and H I data.

Scientific data analysis: Spectral-cube processing; line-profile and self-absorption analysis; SED/column-density modeling; N-PDFs; cloud segmentation/dendrograms; statistical characterization of GMCs.

Scientific computing: Python, R, SQL, Bash; NumPy, SciPy, pandas, Astropy, Matplotlib, scikit-learn, PyTorch, CLASS/GILDAS, Git.

Data science & machine learning: PCA, clustering/Gaussian mixture models, regression, Random Forests, surrogate models, signal/image processing, image segmentation, neural-network prototyping.

Software engineering: C++, Java, C#, .NET/WPF, MVVM; modular architecture, unit testing, version control, CI/CD.

Languages: German (native), English (fluent), Norwegian (beginner).

TEACHING EXPERIENCE

2021–2025 **UNIVERSITY OF COLOGNE** | *Cologne, Germany*

Teaching in Physics / Astrophysics

Led student tutorial sessions, designed problem sets and supporting materials, and graded assignments and examinations.

ADDITIONAL PROFESSIONAL EXPERIENCE

10/2019–03/2021 **HDI** | *Cologne, Germany*

Data Scientist (Actuary)

Developed and automated Solvency II life-insurance models in R; integrated and validated heterogeneous data sources and performed model validation, analysis, and regulatory reporting.

06/2019–09/2019 **HOTTGENROTH** | *Cologne, Germany*

Software Developer

Developed modular energy-simulation software in C#/.NET/WPF, integrating climate data and physics-based building parameters.

06/2017–12/2018 **BIONTECH** | *Mainz, Germany*

Student Software Developer / Software Architecture

Contributed to modular .NET/C# software systems and architecture for biomedical research applications, including collaboration with U.S.-based teams.

09/2014–12/2015 **JOHANNES-GUTENBERG UNIVERSITY MAINZ** | *Mainz, Germany*

Research Assistant — Quantum Physics

Built and tested acousto-optic modulator driver systems for high-precision laser experiments; performed signal testing and iterative hardware/software debugging.

09/2006–06/2009 **DEUTSCHE TELEKOM** | *Mainz, Germany*

IT Specialist (Fachinformatiker), Apprenticeship

Developed software and data-processing tools in C++ and related technologies.

PROFESSIONAL DEVELOPMENT

11/2025 “Foundations and Applications of Machine Learning” — Max Planck Institute for Radio Astronomy (MPIfR), Bonn

09/2024 “Introduction to Machine Learning and PyTorch” — University of Cologne

SUCCESSFUL OBSERVING PROPOSALS

Principal Investigator: APEX telescope time in 2022 and 2024 (36.3 h total) for [C I] observations in M33 and studies of interstellar bubbles.

Co-Investigator: IRAM 30 m and NOEMA telescope time in 2024–2025 (42.8 h total) for molecular-gas, shock, and feedback studies in Cygnus X.

SELECTED SCIENTIFIC PRESENTATIONS

09/2023 **German Astronomical Society, Berlin** — contributed talk: FEEDBACK observations of RCW79

04/2024 **Heritage of SOFIA — Scientific Highlights and Future Perspectives, Stuttgart** — poster: First detection of the [C II] 158 μm line in the intermediate-velocity cloud Draco

07/2024 **Research Group Prof. Walch-Gassner, University of Cologne** — invited seminar: M33 molecular-cloud matching

09/2024 **German Astronomical Society, Cologne** — contributed talk: M33 molecular-cloud matching

05/2025 **Star Formation, Stellar Feedback, and the Ecology of Galaxies, Visegrád** — poster: Reassessing the [C II]-deficit in RCW79

PUBLICATION LIST

10 refereed publications, including 4 first-author papers. My name is shown in bold; publication titles link to the journal DOI.
